COURSE PROFILE

Course Name	Code	Semester	Term	Theory +PS+Lab. (hour/week)	Local Credits	ECTS
Mathematics II	MATH 104	Spring	2	(3+0+0)	3	5

Prerequisites	None

Course Language	English
Course Type	Required
Course Lecturer	• Prof.Dr. Elman Hasanoğlu
Course Assistant	• None
Course Objectives	To learn basic techniques of integration and see the definite integral to compute areas; to learn relative extrema of functions of two variables and see how it is used to solve realistic problems; to learn the use of matrices in solving systems of linear equations.
Course Learning Outcomes	By the end of the course the students should be able to: 1. prepared calculus-based subjects in social sciences, 2. have a knowledge of the fundamental definitions and theorems of elementary calculus, 3. complete routine derivations associated with calculus, recognize elementary applications of differential calculus, and be literate in the language and notation of calculus, 4. Demonstrate knowledge of mathematics to construct, analyze and interpret mathematical models, 5. have the skills of appropriate level for modeling and solving complicated mathematical problems arising in various social sciences as well as in economics, business and psychology.
Course Content	Differentials. The indefinite integrals. Integration with initial conditions, More integration formulas. Techniques of integration, The definite integral.The fundamental theorem of integral calculus. Approximate integration,Area, Integration by parts. Integration by partial fractions, Differential equations (continued). Improper integrals, Partial derivatives Higher-order partial derivatives, Chain rule , Extrema for functions of two variables, Multiple ıntegrals (continued). Matrices. Matrix addition and scalar multiplication. Matrix multiplication. , solving systems by reducing matrices

COURSE CONTENT

Week	Subjects	Related Preparation

1	Differentials. The indefinite integrals. Integration with initial conditions	14.1, 14.2.14.3,
2	More integration formulas. Techniques of integration	14.4, 14.5
3	The definite integral.The fundamental theorem of integral calculus. Approximate integration	14.6, 14.7,14.8
4	Area between curves	14.9
5	Integration by parts. Integration by partial fractions	15.1, 15.2
6	Integration by tables. Average value of functions. Differential equations	15.3,15.4,15.5
7	Differential equations (continued). Improper integrals, Partial derivatives	15.7, 17.1
8	Implicit partial differentiation	17.3
9	Higher-order partial derivatives, Chain rule	17.4, 17.5
10	Extrema for functions of two variables	17.6
11	Lagrange multipliers. Multiple integrals.	17.7, 17.9
12	Multiple integrals (continued). Matrices. Matrix addition and scalar multiplication. Matrix multiplication. , solving systems by reducing matrices	6.1,6.2, 6.3
13	Solving systems by reducing matrices	6.4

| 14 | Solving systems by reducing matrices (continued). Inverses | 6.5,6.6 |

Course Textbooks	Introductory Mathematical Analysis (for Business, Economics, and the Life and Social Sciences), 13th Edition, by Ernest F. Haeussler, Jr., Richard S. Paul and Richard J. Wood, Prentice Hall 2011.

COURSE'S CONTRIBUTION TO PROGRAM

#	Program Qualifications / Outcomes	* Level of Contribution				
		1	2	3	4	5
1	To have a grasp of basic mathematics, applied mathematics and theories and applications of statistics.					X
2	To be able to use theoretical and applied knowledge acquired in the advanced fields of mathematics and statistics,					X
3	To be able to define and analyze problems and to find solutions based on scientific methods,					X
4	To be able to apply mathematics and statistics in real life with interdisciplinary approach and to discover their potentials,				X	
5	To be able to acquire necessary information and to make modeling in any field that mathematics is used and to improve herself/himself,				X	
6	To be able to criticize and renew her/his own models and solutions,					X
7	To be able to tell theoretical and technical information easily to both experts in detail and nonexperts in basic and comprehensible way,				X	
8	To be able to use international resources in English and in a second foreign language from the European Language Portfolio (at the level of B1) effectively and to keep knowledge up-to-date, to communicate comfortably with colleagues from Turkey and other countries, to follow periodic literature,					X
9	To be familiar with computer programs used in the fields of mathematics and statistics and to be able to use at least one of them effectively at the European Computer Driving Licence Advanced Level,					X
10	To be able to behave in accordance with social, scientific and ethical values in each step of the projects involved and to be able to introduce and apply projects in terms of civic				X	

		1	2	3	4	5
	engagement,					
11	To be able to evaluate all processes effectively and to have enough awareness about quality management by being conscious and having intellectual background in the universal sense,				X	
12	By having a way of abstract thinking, to be able to connect concrete events and to transfer solutions, to be able to design experiments, collect data, and analyze results by scientific methods and to interfere,				X	
13	To be able to continue lifelong learning by renewing the knowledge, the abilities and the compentencies which have been developed during the program, and being conscious about lifelong learning,			X		
14	To be able to adapt and transfer the knowledge gained in the areas of mathematics and statistics to the level of secondary school,				X	
15	To be able to conduct a research either as an individual or as a team member, and to be effective in each related step of the project, to take role in the decision process, to plan and manage the project by using time effectively.					X

*1 Lowest, 2 Low, 3 Average, 4 High, 5 Highest

ECTS ALLOCATED BASED ON STUDENT WORKLOAD BY THE COURSE DESCRIPTION

Activities	Number	Duration (Hours)	Total Workload
Course Hours (Including Exams)	14	3	48
